PROFESSIONAL SUMMARY

Frontend Engineer with 2+ years of hands-on experience building scalable, responsive web applications using **React, Next.js, TypeScript, and Tailwind CSS**. Strong in component-driven architecture, modern state management, schema-based validation, and REST API integration. Experienced in **AI-enabled development workflows**, using AI as a productivity aid while independently owning architecture, data flow, and code quality. Focused on performance, accessibility, and building maintainable frontend systems aligned with the modern React ecosystem.

TECHNICAL SKILLS

Frontend: React.js, Next.js (App Router), JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS, Tailwind CSS
State & Data: Zustand, Redux Toolkit, Context API
Forms & Validation: React Hook Form, Zod (schema-based validation)
Testing: Jest, React Testing Library, Cypress
AI & Modern Tooling: AI-assisted development workflows, Vercel platform (deployment & hosting), Cursor / GitHub Copilot (familiarity)
Backend & APIs (Integration): REST APIs, Supabase (familiar), modern backend services (conceptual)
Practices: Component Architecture, Performance Optimization, Accessibility (WCAG), SEO, Agile/Scrum

PROFESSIONAL EXPERIENCE

AppVin Technologies — Software Developer
Noida, Uttar Pradesh | Apr 2024 – Jul 2024

- Developed scalable React and Next.js applications using TypeScript and Tailwind CSS
- Built reusable UI components ensuring consistent design and usability
- Implemented client-side state management using Redux Toolkit with a focus on predictable data flow and testability
- Integrated frontend applications with RESTful backend services
- Improved frontend performance by ~25–30% through component optimization and efficient rendering
- Participated in code reviews and Agile sprint collaboration
- Contributed to shared component libraries and design system patterns to ensure UI consistency across applications
- Delivered features for enterprise and high-traffic products including:
  - Go-Trust (Enterprise Audit Platform): Admin dashboards, role-based access, form validation
  - Domino's (E-commerce Platform): High-traffic UI features, render-time optimization

Antino Labs — Software Developer
Gurugram, Haryana | Aug 2022 – Oct 2023

- Led frontend development using React and SCSS for responsive web platforms
- Improved website performance by ~60% through code splitting, image optimization, and Lighthouse audits
- Built 50+ responsive screens including dashboards, charts, forms, and tables
- Integrated REST APIs and Razorpay payment gateway
- Established modular, reusable component architecture

PROJECTS (AI-AUGMENTED & MODERN FRONTEND)

AI-Powered Admin Dashboard — Next.js, TypeScript, Tailwind CSS

- Built a scalable dashboard using Next.js App Router and server actions
- Used AI-assisted development workflows as a productivity aid to accelerate component scaffolding and refactoring while retaining full manual control over architecture and code quality
- Implemented role-based UI, reusable components, and API-driven data rendering
- Focused on performance, accessibility, and clean architecture

Smart Form Builder with Validation — React, React Hook Form, Zod

- Developed dynamic forms with schema-based validation
- Used AI-assisted development workflows to explore edge cases and improve form UX
- Created reusable form components and validation patterns

UI Animation & Interaction Lab — React, GSAP, Framer Motion

- Built micro-interactions and animation-driven UI components
- Used AI-assisted development workflows while optimizing for performance and UX consistency

PROFESSIONAL DEVELOPMENT

Aug 2024 – Present

- Advanced upskilling in Next.js 14+, App Router, and modern frontend architecture
- Practiced testing with Jest, React Testing Library, and Cypress
- Explored React Native fundamentals and cross-platform concepts
- Built personal projects emphasizing clean code, performance, and usability

EDUCATION

Master of Computer Applications (MCA) — DBU University, Dehradun
Bachelor of Computer Applications (BCA) — SSJ University, Almora
